

Corporate Governance

We focus on the corporate governance as the highest priority issue to address for the management of the company in order to realize our management philosophy, “We will contribute to the creation of new value as a reliable partner that truly satisfies our customers all over the world as well as do business with a challenge spirit and pride, improve our technologies and enhance the efficiency of production activities at all times.” and thereby maximize our corporate value. Our basic approach is that we will establish the system to execute our business that can promptly respond to changes in our business environment, such as structural changes in the economy and society and the rapid progress in the semiconductor market, and create an appropriate system for management and supervision of the company, which enable us to improve the efficiency and transparency of our management of the company.
