

GHG Inventory Reduction Targets

In order to reduce the burden on the global environment, we promote energy and resource conservation activities and aim for a sustainable society.

In the semiconductor testing process, a lot of electricity is consumed to operate the production equipment.

We are working to reduce greenhouse gas emissions, with the aim of improving the operational efficiency of our activities.

With the cooperation of our customers, we can improve efficiency by providing mid- to long-term production plans in advance.

We will decide which production facilities will be in operation and promptly shut off power to production facilities that are not scheduled to be in operation, thereby ensuring efficient operation.

By pursuing this, we are able to reduce power consumption.

GHG Inventory Reduction Targets

classification		the goal
Scope1	Direct emissions by businesses themselves.	Reduce absolute GHG emissions 42% by 2030 from a 2022 base year.
Scope2	Indirect emissions from the use of electricity, heat, etc. supplied by other companies.	
Scope3	Indirect emissions other than Scope1 and Scope2.	Reduce absolute GHG emissions 25% by 2030 from a 2022 base year.
